

AP Biology Experienced

The AP Biology course is changing and this workshop will help you make those changes in a way that will positively impact your students. This course is designed for experienced teachers, so if you have been teaching AP Biology for at least one year join us as we learn about the new test. We will study the new curriculum framework while modifying lessons and activities that span the four Big Ideas and provide experiences in the Science Practices. We will run many of the new labs and have opportunities to work with the AP Statistics participants to make mathematical meaning of our data in line with the emphasis on inquiry in the new curriculum.

Bring your school calendar for reference as we spend time developing a syllabus that incorporates the new curriculum. A copy of your existing syllabus may be helpful while working on the audit requirements.

Not required but recommended are a digital camera, laptop computer, and flash drive. Be sure to bring your personal safety eyewear and a lab coat or apron. This will be a week filled with sharing so bring your favorite activity or idea.
